

Adaptor

Overview	
Let's make use of an adaptor to connect our client to the business object.	
Objectives	Learn how to implement an adaptor
Deployments / Builds	---
What's new	Adaptor?
Aproximate time	10 min.

Tasklist

This is a fairly easy one. Think of an application „A“ expecting a certain interface and an application „B“ providing an interface – unfortunately not the one „A“ expects.

x **Implement:**

Due to this essay task, we would like to ask you to implement the following classes / interfaces:

- 1. AdapterFactory
- 2. Adaptor
- 3. AdaptorImpl

It seems to be a good idea to check, what method is invoked by our client; we assume this method not be be changeable.
