

## Template Method

### Overview

Learn how to implement template methods

<b>Objectives</b>	Get familiar with the idea ...
<b>Deployments / Builds</b>	---
<b>What's new</b>	Having a recipe how things are done ...
<b>Aproximate time</b>	20 min.

### Tasklist

#### x **Implement Superclass: FinancialCheck**

Now it's yours: we do have to do several things to check finances of customers. Every single check needs to be performed by a concrete financial check but probably slightly different. But at the end it is almost the same what needs to be done within a check() method.

#### x **Implement LoanCheck and MortgageCheck**

Extend superclass and provide some behaviour for the checking steps. Are you able to overwrite all superclass' methods?

#### x **Implement client**

... and perform both kinds of checks.
